**NON-FINAL REJECTION**

**Rejections under 35 USC §102**

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that

5 form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

10 (e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

Claims 1-18 are rejected under 35 U.S.C. 102(e) as being anticipated by Gates.

As per claim 1, Gates discloses: the specifying of a hardware fault to simulate  
(column 2, lines 49-53 describes the loading of a command to deliberately cause a  
15 fault); determining a signal to output to cause the fault on a bus (column 2, lines 38-46);  
and, the fault is a simulated fault (column 3, lines 26-28).

As per claim 2, Gates discloses: the use of the fault simulating system on a PCI  
expansion card (column 3, lines 26-28).

As per claim 3, Gates discloses: determining the proper response of a system to  
20 the fault, prior to outputting the fault to the bus (column 4: lines 12-18, lines 32-46 and  
lines 54-64).

As per claim 4, Gates discloses: determining if the system responded correctly to  
the simulated fault (column 3, lines 15-22).

As per claim 5, Gates discloses: determining what bus line is associated with the  
25 fault (column 4, lines 58-64; column 5, lines 8-62).

As per claim 6, Gates discloses: utilizing the line of the bus to produce a simulated error (column 4, lines 58-64).

As per claims 7-9, Gates discloses: determining the voltage need to produce a simulated fault on the bus (column 4, lines 58-64). Gates specifically describes the step of "forces the parity error PERR line of the PCI bus 101 low..." which to one of ordinary skill in the art is equivalent to applying a voltage to a line in a computer system. Clearly as a specific voltage has been chosen for a specific result, the voltage was deliberately determined prior to being applied to the bus. Gates has further specifically recites the use of the system on a PCI numerous times.

Claims 10-18 are rejected as being the data processing system of the method claims 1-<sup>9</sup>~~9~~ of the present invention and are rejected accordingly.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Bryce P Bonzo whose telephone number is (703)305-4834. The examiner can normally be reached on Monday through Friday from 6:30AM to 3:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Beausoliel, can be reached on (703) 305-9713. The fax phone number for the organization where this application or proceeding is assigned is (703) 305-3718.
